Commissioners,

On this week's agenda, there are three demonstrations of how the City of Los Angeles, LAPD, and technology corporations use Los Angeles neighborhoods as testing and development grounds for policing technology and military surveillance tactics. As Angelenos continue to demand housing, services, youth programs, and investment in schools, the LAPD and LAPF (Los Angeles Police Foundation) continue to pump money into policing, and profit from the results.

LAPD wants nearly \$14M to upgrade its Records Management System (RMS). The five-year contract would go to Motorola Solutions Inc., which offers "faster and easier" records management for every piece of information obtained by or sent to LAPD, as well as every piece of information transmitted, stored, or shared between LAPD and its many partners. Former LAPD Chief and current paid Rick Caruso consultant Bill Bratton was placed on the board of Motorola Solutions in 2011.

It's no surprise that LAPD would give a contract to Motorola, a corporation that helps channel money to LAPD, both through donations to LAPF - where Motorola salesperson Hugh O'Donnell was a long-time board member, and where Joseph Warner, Senior Account Executive at Motorola sits on the board now - and by serving as a willing partner in LAPD's experimental and carceral surveillance tactics in Black, brown, and poor neighborhoods. With its technology, Motorola will continue its tracking and criminalization of people in LA, this time based on a person's movements or very appearance on video, with software that claims to "transform video surveillance from reactive monitoring to automated proactive alerts" when a person, object or vehicle "of interest" is detected by

cameras. There is no mention of how this will work, though the software does incorporate technology from Motorola acquisitions Avigilon and WatchGuard, both of which specialize in video analytics and facial recognition.

LAPD further wants to increase funding to Axon, another long-time corporate partner with deep connections to the department, including that former COP Charlie Beck sits on Axon's so-called AI Ethics Board. With a \$6.9M contract, the city of LA wants to pay Axon for an in-fleet recording platform to add two cameras to 1500 cop cars. Mentioned nowhere by LAPD is that each camera will also have the ability to scan license plates; meaning 3000 Automatic License Plate Readers (ALPRs) will be added to LA streets, constantly gathering information for potential use as "evidence." This is a shameful use of city funding as we demand more services, not more spying and surveillance.

Additionally, the Police Foundation is funding software for LAPD's drones for Traffic Group to create geospatial maps of areas over which drones have flown. We rejected LAPD use of drones in 2014 and 2017 when they were proposed as weapons of surveillance, and we reject them today! LAPD does not need drones. Part of LAPD's militarized occupation and assault includes surveillance from the air, which is accomplished in part by LAPD drones. No drones for LAPD!

Finally, remove the limitations on public comment! Members of the communities most affected by policing are by far the most knowledgeable about the real-world effects of the matters before the board, and about LAPD in their neighborhoods, and you need to hear what they have to say.

Thank you,

Caroline

**Subject:** BOPC Public Comment: 5/10/2022

**ATTENTION: This email originated outside of LAPD. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

Dear Board of Commissioners and City Council Members:

As a citizen of Los Angeles District 11 I'm writing to submit public comments to the LAPC Meeting.

#### **Agenda Item 4C**

This is another example of nepotism and corruption within LAPD. Motorola helps channel money to LAPD, both through donations to LAF - where Motorola salesperson Hugh O'Donnell was a long-time board member, and where Joseph Warner, Senior Account Executive at Motorola sits on the board now - and by serving as a willing partner in LAPD's experimental and carceral surveillance tactics in Black, brown, and poor neighborhoods.

Aside from the problematic relationship between LAPD and Motorola, this entire program and partnership invades on human rights of privacy. This technology is used and will be used to continue tracking and criminalizing people in LA based on a person's movements or very appearance on video, with software that claims to "transform video surveillance from reactive monitoring to automated proactive alerts" when a person, object or vehicle "of interest" is detected by cameras. There is no mention of how this will work, though the software does incorporate technology from Motorola acquisitions Avigilon and WatchGuard, both of which specialize in video analytics and facial recognition. This is gross. LAPD has shown time and time again that they cannot be trusted. Why do you keep rubber stamping the approval for them to use more and more invasive technology?

#### **Agenda Item 4D**

Again, *we want more community services not spying and surveillance.* LAPD and Axon also have a problematic, corrupt relationship. With a \$6.9M contract, the city of LA wants to pay Axon for an in-fleet recording platform to add two cameras to 1500 cop cars. What LAPD is hiding and what you fail to worry about is that each camera will also have the ability to scan license plates; meaning 3000 Automatic License Plate Readers (ALPRs) will be added to LA streets, constantly gathering information for potential use as "evidence."

#### **General Public Comment: LAPD and Drones**

Police Foundation is funding software for LAPD's drones for Traffic Group to create geospatial maps of areas over which drones have flown. We rejected LAPD use of drones in 2014 and 2017 when they were proposed as weapons of

surveillance, and we reject them today! LAPD does not need drones. Part of LAPD's militarized occupation and assault includes surveillance from the air, which is accomplished in part by LAPD drones. No drones for LAPD! I'm tired of LAPD invading my privacy and surveillancing me.

### **LAPD and Tech Corporation**

These are all prime examples of how LA, LAPD, and technology corporations use Los Angeles neighborhoods as testing and development grounds for policing technology and military surveillance tactics. As Angelenos continue to demand housing, services, youth programs, and investment in schools, the LAPD and LAPF (Los Angeles Police Foundation) continue to pump money into policing, and profit from the results. This is grossly wrong.

### **General Public Comment: Public Comment Limitations**

Stop capping your meetings' public comment period at a mere forty-five minutes. You give 45 minutes for public comment from a city of 4 million people. Despite your weekly protestations to the contrary, you are silencing the voices of Angelenos by limiting who can speak at your meetings, and for how long.

Let people speak after each agenda item; the other way doesn't make sense.

Members of the communities most affected by policing are by far the most knowledgeable about the real-world effects of the matters before the board, and about LAPD in their neighborhoods, and you need to hear what they have to say.

### **General Public Comment: LAPC Meeting Time**

Why are these meetings held at the same time as City Council and Board of Supervisor meetings? Can we please change the meeting time so more people can participate in the meetings?

Sincerely,  
Sarah Bowers

**ATTENTION: This email originated outside of LAPD. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

Commissioners,

On this week's agenda, there are three demonstrations of how the City of Los Angeles, LAPD, and technology corporations use Los Angeles neighborhoods as testing and development grounds for policing technology and military surveillance tactics. As Angelenos continue to demand housing, services, youth programs, and investment in schools, the LAPD and LAPF (Los Angeles Police Foundation) continue to pump money into policing, and profit from the results.

LAPD wants nearly \$14M to upgrade its Records Management System (RMS). The five-year contract would go to Motorola Solutions Inc., which offers "faster and easier" records management for every piece of information obtained by or sent to LAPD, as well as every piece of information transmitted, stored, or shared between LAPD and its many partners. Former LAPD Chief and current paid Rick Caruso consultant Bill Bratton was placed on the board of Motorola Solutions in 2011.

It's no surprise that LAPD would give a contract to Motorola, a corporation that helps channel money to LAPD, both through donations to LAPF - where Motorola salesperson Hugh O-Donnell was a long-time board member, and where Joseph Warner, Senior Account Executive at Motorola sits on the board now - and by serving as a willing partner in LAPD's experimental and carceral surveillance tactics in Black, brown, and poor neighborhoods. With its technology, Motorola will continue its tracking and criminalization of people in LA, this time based on a person's movements or very appearance on video, with software that claims to "transform video surveillance from reactive monitoring to automated proactive alerts" when a person, object or vehicle "of interest" is detected by cameras. There is no mention of how this will work, though the software does incorporate technology from Motorola acquisitions Avigilon and WatchGuard, both of which specialize in video analytics and facial recognition.

LAPD further wants to increase funding to Axon, another long-time corporate partner with deep connections to the department, including that former COP Charlie Beck sits on Axon's so-called AI Ethics Board. With a \$6.9M contract, the city of LA wants to pay Axon for an in-fleet recording platform to add two cameras to 1500 cop cars. Mentioned nowhere by LAPD is that each camera will also have the ability to scan license plates; meaning 3000 Automatic License

Plate Readers (ALPRs) will be added to LA streets, constantly gathering information for potential use as “evidence.” This is a shameful use of city funding as we demand more services, not more spying and surveillance.

Additionally, the Police Foundation is funding software for LAPD’s drones for Traffic Group to create geospatial maps of areas over which drones have flown. We rejected LAPD use of drones in 2014 and 2017 when they were proposed as weapons of surveillance, and we reject them today! LAPD does not need drones. Part of LAPD’s militarized occupation and assault includes surveillance from the air, which is accomplished in part by LAPD drones. No drones for LAPD!

Finally, remove the limitations on public comment! Members of the communities most affected by policing are by far the most knowledgeable about the real-world effects of the matters before the board, and about LAPD in their neighborhoods, and you need to hear what they have to say.

Signed,

Athena Wheaton  
Los Angeles resident

**From:** Bill Watkins <[REDACTED]>  
**Sent:** Monday, May 9, 2022 1:44 PM  
**To:** Police Commission  
**Subject:** Public Comment

**ATTENTION: This email originated outside of LAPD. Do not click on links or open attachments unless you recognize the sender and know the content is safe.**

*Bill Watkins' Public Comment – LAPD Commission for 5-10-2022*

*On Covid, Covid obsession, Covid reports:*

Western medicine is not health itself. Be wary of every order coming from doctors that stand to gain from a supposed pandemic.

If we paid attention to the L.A. River, cleaned up our natural spaces, and took care of our own health through exercise, diet, socializing, loving, working, and playing in balance: our immune systems would be more than enough to handle any hyped up virus or disease.

Live well.

*On LAPD "Air Support:"*

Improve our quality of life also by ending the loud war operation over our heads, the LAPD "Air Support" division thriving over our homes since around 1970. That's the last time we did a public survey on the use of loud, costly, invasive choppers.

They fly *low* enough to violate our fourth amendment rights to privacy. They fly *often* enough to disturb the peace. Please reconsider their use, and look low-tech to more non-lethally armed foot patrols.

Choppers are the loudest, worst presence in my community (Hollenbeck Division, El Sereno/Rose Hills). Second is illegal fireworks, something vice units should get into (join with County Fire Arson Investigators), go undercover and root out (even if it takes us to New Mexico/Nevada lines). To folks with PTSD and our pets, use of illegal fireworks is clearly a violent crime, injuries mounting up with it every year...

*On Lethal Force:*

I recently spent some time with an LAPD officer, who went over a variety of potentially lethal situations he and his fellows face while on the job, trying to protect and serve. He was surprisingly convincing, had me on the edge of my seat, and I was close to renouncing some of my religious views—the main one with relevance being the Sixth Commandment of the Jewish Torah:

Thou shalt not kill.

The officer was convincing with the set of conditions in front of him, as a lethally trained officer, *but...* After a few days to meditate, I recalled the big picture. Stolen Native American land... Guns and more guns rationalized by bibles, then the forced industrialization and development of this once thriving wilderness turn New Europe.

In the insanity civilization has created, the normalization of fast cars, planes, and even the loud war machine helicopters above us claiming law enforcement: one could argue that indeed some people need killing. An insane notion made almost palatable on the concrete and asphalt of this city: law officers speeding around in fancy cars burning earth, flying around over our homes burning more earth—

Showing up mid-conflict... someone draws a knife, or a gun, or a machete... and now? The police officer called in with few facts and limited knowledge of a crime scene shows up to make a life or death decision with his or her lethal firearm. They trained to kill, trained to shoot for the largest mass on the human body—the torso, the chest, the heart... to kill.

And given all of that, all that touring around in fire-burning vehicles across this once natural area turned polluted metropolis: they are out of touch. Their boots are not on the ground. They don't know the suspect nor the suspect's family. They often know only a little about the community they enforce, and what they do know they know driving at high speeds or worse yet, flying loud metal choppers from above us.

*Lethal force in policing is always wrong*, I still assert. Even after an LAPD officer's impassioned plea to me and set of scenario explanations... Why? Because the concept of "America," land theft and the forced industrialization of this land has created the insane situations they experience that only *seem* to justify the taking of human life on the job.

I reject lethal force. I reject lethal force training. But well before that, I reject "Los Angeles," the "United States of America" and any other concepts deriving from a racist, criminal theft of land some like to call a romantic conquest so they can keep benefitting from sin. Putting down our guns may not be the first step toward proper amends, but it is one.

It's time to question the founding of this New Europe on stolen Native American land, where gun use is too often justified in the loud, polluted insanity industrialization has created here.

An attacker's or wrongdoer's *heart does not have to stop for them to no longer be a threat*. Killing a wrongdoer is overkill to true defense. We need a scientific review of real defense; we need to look outside the box for better, more inventive non-lethal approaches.

The United Kingdom, whose Robert Peelers and Bobbies founded modern policing, chooses to patrol its communities with officers only 10 percent lethally armed.

(<https://www.nbcnews.com/news/world/why-london-won-t-arm-all-police-despite-severe-terror-n737551>)

90 percent patrolling without guns! True policing, Robert Peel put forth, depended on the *consent of the people*. By the sound of callers calling in, you have the support of some of us, but it is obvious that a majority consent is not there to routinely patrol with lethal force.

*Helicopters Part Two:*

Neither do I see any proof of the people's consent to patrol our communities with *helicopters*. A NASA study was done over fifty years ago in 1970, and a poll was done in two divisions. (<https://travelingpoet.net/2019/09/17/old-science-cant-justify-lapd-choppers/>) Noise complaints were recorded, but some citizens supported the choppers—

Which seemed enough for you to publish that:

"The citizens of Los Angeles accept helicopter patrols as a necessary part of the City's police system and strongly favor their continuation." (<https://www.lapdonline.org/office-of-the-chief-of-police/office-of-special-operations/air-support-division/history-of-the-air-support-division/>)

The above statement is a gross mischaracterization of the 52-year old NASA study, a piece of propaganda to keep choppers flying over our homes in violation of our fourth amendment rights to privacy -- disturbing the peace, adding to other crimes the crime of noise. The costs of burning earth's fuels, the air pollution is vast as well...

And yet we are stuck with a false representation of a fifty-two year old study, cherry picked to keep running a loud, destructive war over this town.

You do not have my consent to fly your choppers over my home. You do not have the people's consent to conduct mostly-armed patrols. Stand down and listen. Ask for and wait for our consent... If not there, please back off.

\*\*\*

*Re: 2021 Use of Force Report:*

From the Executive Summary, page 13 (page 15 in full report), "Department Core Values," I'd like to highlight a blank section at the bottom right of the page. That blank spot is calling out for a new/old-as-time potential core value:

RESPECT THE ENVIRONMENT.

Caring for mother earth should be a core value of the LAPD and of ever human being. Put it down on paper. Live it. Ground those choppers, or at least begin to rethink them. Look for ways to use less guns, less choppers, less loud, gas-guzzling military force, and we will all reap the benefits of a truly improved quality of life here.

*Bill Watkins, Resident  
Rose Hills Community*

On this week's agenda, there are three demonstrations of how the City of Los Angeles, LAPD, and technology corporations use Los Angeles neighborhoods as testing and development grounds for policing technology and military surveillance tactics. As Angelenos continue to demand housing, services, youth programs, and investment in schools, the LAPD and LAPF (Los Angeles Police Foundation) continue to pump money into policing, and profit from the results.

LAPD wants nearly \$14M to upgrade its Records Management System (RMS). The five-year contract would go to Motorola Solutions Inc., which offers "faster and easier" records management for every piece of information obtained by or sent to LAPD, as well as every piece of information transmitted, stored, or shared between LAPD and its many partners. Former LAPD Chief and current paid Rick Caruso consultant Bill Bratton was placed on the board of Motorola Solutions in 2011.

It's no surprise that LAPD would give a contract to Motorola, a corporation that helps channel money to LAPD, both through donations to LAPF - where Motorola salesperson Hugh O-Donnell was a long-time board member, and where Joseph Warner, Senior Account Executive at Motorola sits on the board now - and by serving as a willing partner in LAPD's experimental and carceral surveillance tactics in Black, brown, and poor neighborhoods. With its technology, Motorola will continue its tracking and criminalization of people in LA, this time based on a person's movements or very appearance on video, with software that claims to "transform video surveillance from reactive monitoring to automated proactive alerts" when a person, object or vehicle "of interest" is detected by cameras. There is no mention of how this will work, though the software does incorporate technology from Motorola acquisitions Avigilon and WatchGuard, both of which specialize in video analytics and

facial recognition. Facial recognition is a dangerous and racist technology, and only endangers innocent Black and Brown community members.

LAPD further wants to increase funding to Axon, another long-time corporate partner with deep connections to the department, including that former COP Charlie Beck sits on Axon's so-called AI Ethics Board. With a \$6.9M contract, the city of LA wants to pay Axon for an in-fleet recording platform to add two cameras to 1500 cop cars. Mentioned nowhere by LAPD is that each camera will also have the ability to scan license plates; meaning 3000 Automatic License Plate Readers (ALPRs) will be added to LA streets, constantly gathering information for potential use as "evidence." This is a shameful use of city funding. We demand services that actually invest in our community members, not more spying and surveillance.

Additionally, the Police Foundation is funding software for LAPD's drones for Traffic Group to create geospatial maps of areas over which drones have flown. We rejected LAPD use of drones in 2014 and 2017 when they were proposed as weapons of surveillance, and we continue to reject them today! LAPD does not need drones. Part of LAPD's militarized occupation and assault includes surveillance from the air, which is accomplished in part by LAPD drones. No drones for LAPD!

Finally, and yet again: remove the limitations on public comment! Members of the communities most affected by policing are by far the most knowledgeable about the real-world effects of the matters before the board, and about LAPD in their neighborhoods, and you need to hear what they have to say. To block these community members from giving public comment is anti-democratic and shameful.

Signed,  
Jack MacCarthy

Commissioners,

On this week's agenda, there are three demonstrations of how the City of Los Angeles, LAPD, and technology corporations use Los Angeles neighborhoods as testing and development grounds for policing technology and military surveillance tactics. As Angelenos continue to demand housing, services, youth programs, and investment in schools, the LAPD and LAPF (Los Angeles Police Foundation) continue to pump money into policing, and profit from the results.

LAPD wants nearly \$14M to upgrade its Records Management System (RMS). The five-year contract would go to Motorola Solutions Inc., which offers "faster and easier" records management for every piece of information obtained by or sent to LAPD, as well as every piece of information transmitted, stored, or shared between LAPD and its many partners. Former LAPD Chief and current paid Rick Caruso consultant Bill Bratton was placed on the board of Motorola Solutions in 2011.

It's no surprise that LAPD would give a contract to Motorola, a corporation that helps channel money to LAPD, both through donations to LAPF - where Motorola salesperson Hugh O-Donnell was a long-time board member, and where Joseph Warner, Senior Account Executive at Motorola sits on the board now - and by serving as a willing partner in LAPD's experimental and carceral surveillance tactics in Black, brown, and poor neighborhoods. With its technology, Motorola will continue its tracking and criminalization of people in LA, this time based on a person's movements or very appearance on video, with software that claims to "transform video surveillance from reactive monitoring to automated proactive alerts" when a person, object or vehicle "of interest" is detected by cameras. There is no mention of how this will work, though the software does incorporate technology from Motorola acquisitions Avigilon and WatchGuard, both of which specialize in video analytics and facial recognition.

LAPD further wants to increase funding to Axon, another long-time corporate partner with deep connections to the department, including that former COP Charlie Beck sits on Axon's so-called AI Ethics Board. With a \$6.9M contract, the city of LA wants to pay Axon for an in-fleet recording platform to add two cameras to 1500 cop cars. Mentioned

nowhere by LAPD is that each camera will also have the ability to scan license plates; meaning 3000 Automatic License Plate Readers (ALPRs) will be added to LA streets, constantly gathering information for potential use as “evidence.” This is a shameful use of city funding as we demand more services, not more spying and surveillance.

Additionally, the Police Foundation is funding software for LAPD’s drones for Traffic Group to create geospatial maps of areas over which drones have flown. We rejected LAPD use of drones in 2014 and 2017 when they were proposed as weapons of surveillance, and we reject them today! LAPD does not need drones. Part of LAPD’s militarized occupation and assault includes surveillance from the air, which is accomplished in part by LAPD drones. No drones for LAPD!

Finally, remove the limitations on public comment! Members of the communities most affected by policing are by far the most knowledgeable about the real-world effects of the matters before the board, and about LAPD in their neighborhoods, and you need to hear what they have to say.

Thank you,  
Rachel Rosenbloom

Commissioners,

On this week's agenda, there are three demonstrations of how the City of Los Angeles, LAPD, and technology corporations use Los Angeles neighborhoods as testing and development grounds for policing technology and military surveillance tactics. As Angelenos continue to demand housing, services, youth programs, and investment in schools, the LAPD and LAPF (Los Angeles Police Foundation) continue to pump money into policing, and profit from the results.

LAPD wants nearly \$14M to upgrade its Records Management System (RMS). The five-year contract would go to Motorola Solutions Inc., which offers "faster and easier" records management for every piece of information obtained by or sent to LAPD, as well as every piece of information transmitted, stored, or shared between LAPD and its many partners. Former LAPD Chief and current paid Rick Caruso consultant Bill Bratton was placed on the board of Motorola Solutions in 2011.

It's no surprise that LAPD would give a contract to Motorola, a corporation that helps channel money to LAPD, both through donations to LAPF - where Motorola salesperson Hugh O'Donnell was a long-time board member, and where Joseph Warner, Senior Account Executive at Motorola sits on the board now - and by serving as a willing partner in LAPD's experimental and carceral surveillance tactics in Black, brown, and poor neighborhoods. With its technology, Motorola will continue its tracking and criminalization of people in LA, this time based on a person's movements or very appearance on video, with software that claims to "transform video surveillance from reactive monitoring to automated proactive alerts" when a person, object or vehicle "of interest" is detected by cameras. There is no mention of how this will work, though the software does incorporate technology from Motorola acquisitions Avigilon and WatchGuard, both of which specialize in video analytics and facial recognition.

LAPD further wants to increase funding to Axon, another long-time corporate partner with deep connections to the department, including that former COP Charlie Beck sits on Axon's so-called AI Ethics Board. With a \$6.9M contract, the city of LA wants to pay Axon for an in-fleet recording platform to add two cameras to 1500 cop cars. Mentioned nowhere by LAPD is that each camera will also have the ability to scan license plates; meaning 3000 Automatic License Plate Readers (ALPRs) will be added to LA streets, constantly gathering information for potential use as "evidence." This is a shameful use of city funding as we demand more services, not more spying and surveillance.

Additionally, the Police Foundation is funding software for LAPD's drones for Traffic Group to create geospatial maps of areas over which drones have flown. We rejected LAPD use of drones in 2014 and 2017 when they were proposed as weapons of surveillance, and we reject them today! LAPD does not need drones. Part of LAPD's militarized occupation and assault includes surveillance from the air, which is accomplished in part by LAPD drones. No drones for LAPD!

Finally, remove the limitations on public comment! Members of the communities most affected by policing are by far the most knowledgeable about the real-world effects of the matters before the board, and about LAPD in their neighborhoods, and you need to hear what they have to say.

Signed,  
Zach Sherwin

Commissioners,

On this week's agenda, there are three demonstrations of how the City of Los Angeles, LAPD, and technology corporations use Los Angeles neighborhoods as testing and development grounds for policing technology and military surveillance tactics. As Angelenos continue to demand housing, services, youth programs, and investment in schools, the LAPD and LAPF (Los Angeles Police Foundation) continue to pump money into policing, and profit from the results.

LAPD wants nearly \$14M to upgrade its Records Management System (RMS). The five-year contract would go to Motorola Solutions Inc., which offers "faster and easier" records management for every piece of information obtained by or sent to LAPD, as well as every piece of information transmitted, stored, or shared between LAPD and its many partners. Former LAPD Chief and current paid Rick Caruso consultant Bill Bratton was placed on the board of Motorola Solutions in 2011.

It's no surprise that LAPD would give a contract to Motorola, a corporation that helps channel money to LAPD, both through donations to LAPF - where Motorola salesperson Hugh O-Donnell was a long-time board member, and where Joseph Warner, Senior Account Executive at Motorola sits on the board now - and by serving as a willing partner in LAPD's experimental and carceral surveillance tactics in Black, brown, and poor neighborhoods. With its technology, Motorola will continue its tracking and criminalization of people in LA, this time based on a person's movements or very appearance on video, with software that claims to "transform video surveillance from reactive monitoring to automated proactive alerts" when a person, object or vehicle "of interest" is detected by cameras. There is no mention of how this will work, though the software does incorporate technology from Motorola acquisitions Avigilon and WatchGuard, both of which specialize in video analytics and facial recognition.

LAPD further wants to increase funding to Axon, another long-time corporate partner with deep connections to the department, including that former COP Charlie Beck sits on Axon's so-called AI Ethics Board. With a \$6.9M contract, the city of LA wants to pay Axon for an in-fleet recording platform to add two cameras to 1500 cop cars. Mentioned nowhere by LAPD is that each camera will also have the ability to scan license plates; meaning 3000 Automatic License Plate Readers (ALPRs) will be added to LA streets, constantly gathering information for potential use as "evidence." This is a shameful use of city funding as we demand more services, not more spying and surveillance.

Additionally, the Police Foundation is funding software for LAPD's drones for Traffic Group to create geospatial maps of areas over which drones have flown. We rejected LAPD use of drones in 2014 and 2017 when they were proposed as weapons of surveillance, and we reject them today! LAPD does not need drones. Part of LAPD's militarized occupation and assault includes surveillance

from the air, which is accomplished in part by LAPD drones. We continue to reject the use of drones for LAPD.

Finally, remove the limitations on public comment! Members of the communities most affected by policing are by far the most knowledgeable about the real-world effects of the matters before the board, and about LAPD in their neighborhoods, and you need to hear what they have to say.

Sincerely,  
Laura Adery, Ph.D
